

NBS SPECIAL PUBLICATION **546**

1980 Edition

U.S. DEPARTMENT OF COMMERCE/National Bureau of Standards

Catalog of Federal Metrology and Calibration Capabilities

NATIONAL BUREAU OF STANDARDS

The National Bureau of Standards¹ was established by an act of Congress on March 3, 1901. The Bureau's overall goal is to strengthen and advance the Nation's science and technology and facilitate their effective application for public benefit. To this end, the Bureau conducts research and provides: (1) a basis for the Nation's physical measurement system, (2) scientific and technological services for industry and government, (3) a technical basis for equity in trade, and (4) technical services to promote public safety. The Bureau's technical work is performed by the National Measurement Laboratory, the National Engineering Laboratory, and the Institute for Computer Sciences and Technology.

THE NATIONAL MEASUREMENT LABORATORY provides the national system of physical and chemical and materials measurement; coordinates the system with measurement systems of other nations and furnishes essential services leading to accurate and uniform physical and chemical measurement throughout the Nation's scientific community, industry, and commerce; conducts materials research leading to improved methods of measurement, standards, and data on the properties of materials needed by industry, commerce, educational institutions, and Government; provides advisory and research services to other Government agencies; develops, produces, and distributes Standard Reference Materials; and provides calibration services. The Laboratory consists of the following centers:

Absolute Physical Quantities² — Radiation Research — Thermodynamics and
Molecular Science — Analytical Chemistry — Materials Science.

THE NATIONAL ENGINEERING LABORATORY provides technology and technical services to the public and private sectors to address national needs and to solve national problems; conducts research in engineering and applied science in support of these efforts; builds and maintains competence in the necessary disciplines required to carry out this research and technical service; develops engineering data and measurement capabilities; provides engineering measurement traceability services; develops test methods and proposes engineering standards and code changes; develops and proposes new engineering practices; and develops and improves mechanisms to transfer results of its research to the ultimate user. The Laboratory consists of the following centers:

Applied Mathematics — Electronics and Electrical Engineering² — Mechanical
Engineering and Process Technology² — Building Technology — Fire Research —
Consumer Product Technology — Field Methods.

THE INSTITUTE FOR COMPUTER SCIENCES AND TECHNOLOGY conducts research and provides scientific and technical services to aid Federal agencies in the selection, acquisition, application, and use of computer technology to improve effectiveness and economy in Government operations in accordance with Public Law 89-306 (40 U.S.C. 759), relevant Executive Orders, and other directives; carries out this mission by managing the Federal Information Processing Standards Program, developing Federal ADP standards guidelines, and managing Federal participation in ADP voluntary standardization activities; provides scientific and technological advisory services and assistance to Federal agencies; and provides the technical foundation for computer-related policies of the Federal Government. The Institute consists of the following centers:

Programming Science and Technology — Computer Systems Engineering.

¹Headquarters and Laboratories at Gaithersburg, MD, unless otherwise noted;
mailing address Washington, DC 20234.

²Some divisions within the center are located at Boulder, CO 80303.

CATALOG OF FEDERAL METROLOGY AND CALIBRATION CAPABILITIES

Kathryn O. Leedy
PMTE Project
Office of Measurement Services
National Bureau of Standards
Washington, DC 20234

ABSTRACT

This publication lists Federal laboratories involved in metrology and calibration. Included is the name of a person to contact at each laboratory for more information as well as the laboratory telephone number and address. The capabilities of each laboratory are indicated in a tabular listing by agency. To provide geographical distribution, the laboratories are listed by States. In addition, the laboratories are shown on a map by coded number. Other references are described.

Key words: Calibration; Federal Government; laboratory; measurement; metrology; precision; test equipment.

I. INTRODUCTION

This is a directory of Federal measurement standards laboratories. For each laboratory listed in the directory, the citation includes the laboratory name, location, and a point of contact with telephone number. The capabilities of each laboratory are listed in chart form. A map depicting the geographical distribution of the laboratories is also provided.

The information in this catalog is assembled and maintained by the Office of Measurement Services (OMS) at the National Bureau of Standards (NBS) in conjunction with its program on the Federal Government's management and use of precision measuring and test equipment (PMTE). The PMTE Project was recently established as a special project to coordinate PMTE activities throughout the Federal Government, and to facilitate communications and cooperation among various Federal agencies. A description of the PMTE Project is given in Appendix I.

This catalog is designed to encourage cooperation among agencies and to promote the exchange of services and/or equipment in an effort to reduce the growth rate of Federal metrology and calibration facilities. The catalog, which will eventually include all Federal metrology and calibration laboratories, is only part of a broad plan to enable the Federal Government to reduce duplication of services and provide a better allocation of resources. Subsequent updated editions will be issued regularly. To obtain further information, contact the Office of Measurement Services.

(301) 921-2805

This catalog is a compilation of information received from the agencies and laboratories listed. It should not be construed as an endorsement or rating of the individual laboratories by the National Bureau of Standards.

II. HOW TO USE THIS CATALOG

To locate a particular laboratory, consult the directory in Section III. Here the laboratories are listed alphabetically within the sections for each agency. A code number is assigned each laboratory for use in the geographical index (see Section V).

To obtain policy information from any of the agencies listed, contact the person listed for each agency in Section III.

To identify a laboratory with a particular capability, review the charts in Section IV. Here the laboratories are listed by name within the sections for each agency. The categories of capability are listed across the top of the chart (an explanation of the categories is given in Appendix II). For each capability of a laboratory, there is a mark in the corresponding category column.

To locate laboratories in a given geographical area, consult Section V. It lists the laboratories by State and includes a map of the United States with the location of each laboratory noted by its number code.

Appendix II describes the capability categories used in Section IV. Other sources of information are given in Appendix III. Included are descriptions of the National Conference of Standards Laboratories and the Government-Industry Data Exchange Program (GIDEP) system.

V. GEOGRAPHICAL LISTING

This section is designed to assist in the location of a laboratory in a given geographical area. First there is a listing of laboratories by States. Each laboratory, listed by name only, is assigned a code. This code can be used to obtain further information about the laboratory by consulting the listings in Section III. The appropriate pages are given as follows:

<u>ORGANIZATION</u>	<u>CODE</u>	<u>PAGE</u>
DEPARTMENT OF COMMERCE	G	4
National Bureau of Standards		4
National Oceanic and Atmospheric Administration		4
DEPARTMENT OF DEFENSE		5
Air Force	A	5
Army	B	13
Navy	C	17
DEPARTMENT OF ENERGY	D	21
DEPARTMENT OF HEALTH AND HUMAN SERVICES	H	25
Public Health Services		25
DEPARTMENT OF TRANSPORTATION	E	26
Federal Aviation Administration		26
Federal Rail Administration		26
National Highway Transportation Safety Administration		26
United States Coast Guard		27
FEDERAL COMMUNICATIONS COMMISSION	J	28
FEDERAL AERONAUTICS AND SPACE ADMINISTRATION	F	29

A map showing the location of each of the laboratories is given in Figure 1 (page 59). The codes shown are those described above.

LABORATORY LISTING BY STATE

<u>Code</u>	<u>Name</u>	<u>Zip Code</u>
<u>ALABAMA</u>		
B8	Anniston Army Depot	36201
F9	George C. Marshall Space Flight Center	35812
A85	Maxwell Air Force Base	36112
B38	Missile Calibration Laboratory	35809
B1	U.S. Army Metrology & Calibration Center	35809
B12	95th Service Co.	35809
<u>ALASKA</u>		
E2	AMB-4 Laboratory, FAA	99502
A58	Eielson Air Force Base	99702

APPENDIX I.

PMTE PROJECT BACKGROUND

The Precision Measuring and Test Equipment (PMTE) Project was initiated after the Government Accounting Office (GAO) studied the Federal Government's management and use of PMTE and concluded that there is a lack of intra-agency and inter-agency coordination and planning. This lack of coordination and planning has, in some cases, resulted in unnecessary expenditures for duplicate facilities. The GAO also found that agencies are not making use of available commercial laboratory services, but are building up in-house capability instead.

As a result of these findings, the Office of Management and Budget (OMB) asked that the NBS take the following actions:

- Assume the lead for coordinating improvements in the management and use of PMTE.
- Assist agencies as necessary to identify areas for improvement.
- Recommend to OMB such actions as are needed to improve the management and use of such equipment.

The PMTE Project was established at NBS to respond to this request. The overall objective of this program is to coordinate improvements in the management and use of PMTE within the Federal Government. To this end, the Project has undertaken tasks in several areas in order to improve the communications and exchange of information among individuals and facilities involved in the management or use of PMTE. (1) It has published "PMTE UPDATE", a newsletter distributed to interested parties throughout the Federal PMTE community. This newsletter is designed to provide timely information on new developments, publications, and meetings, to describe successful strategies of PMTE management and use, and to provide a forum for discussing issues of current interest to the community. (2) It has organized and chaired quarterly meetings of the Interagency PMTE Committee which allows representatives from Federal agencies an opportunity to exchange information on PMTE problems and successes. (3) It has encouraged and assisted other agencies to promote communications within their agencies by co-hosting workshops to improve interactions in PMTE areas.

The PMTE Project has also awarded a contract to study the use of alternatives to out-of-service equipment calibrations for economy and measurement quality assurance and control in the Federal Government, and the optimization of calibration recall intervals and algorithms for PMTE.

It is hoped that these studies will identify particularly effective existing technologies and management techniques that can be adopted for use in Federal agencies.

Interagency cooperation is also being encouraged by the PMTE Project in the area of transferring manpower slots between agencies in order that resources might be used more efficiently and effectively.

The PMTE Project is in the process of gathering information on terms and definitions commonly used in conjunction with metrology and calibration within the Federal Government. These terms will be listed in a publication which will include a preferred definition of each term, as well as other definitions currently being used. This effort is intended to encourage and promote unity in the use of terms throughout the measurement community in order that communications between agencies in the Federal Government can be more precise and meaningful.

APPENDIX II.

CATEGORY DESCRIPTIONS

In order that the user of this catalog may better interpret the laboratory capabilities as indicated by the categories in Section IV, the following examples are given. They are intended only to indicate the type of measurement to be included in each category and are not to be considered an all-inclusive listing.

1. ELECTRICAL - DC/LF

DC Voltage	AC Voltage (low freq.)
DC Voltage ratio	AC Current (low freq.)
DC Current	Capacitance
Resistance	Inductance
2. ELECTRICAL - RF/MICROWAVE

AC Voltage	Capacitance
AC Voltage ratio	Inductance
AC Current	Reflection coefficient
Phase Angle	RF power
Attenuation	Laser power
3. MAGNETICS, DIELECTRICS

Magnetic field	
Magnetic material properties	
Dielectric material properties	
4. TIME & FREQUENCY

Time	
Frequency	
5. MASS, FORCE, DENSITY

Mass	Acceleration
Density	Shock
Force	Vibration
Torque	
6. DIMENSIONAL, OPTICS, SURFACES

Length	Refractive index
Inside diameter	Optical lens evaluation
Roundness, concentricity	Optical alignment
Angle	Flatness
Volume	Surface roughness
Thread	Hardness
7. ACOUSTICS, SOUND, NOISE VIBRATION

Acoustics	
Sound pressure level	
Microphone sensitivity	

- | | | |
|-----|--|---|
| 8. | LIQUID & GAS FLOW
Liquid flow
Gas flow | Hydraulics
Air speed |
| 9. | HUMIDITY
Relative humidity
Absolute humidity | |
| 10. | TEMPERATURE
Temperature | |
| 11. | PRESSURE, VACUUM
Pressure
Vacuum
Altimetry | |
| 12. | IONIZING RADIATION, RADIOACTIVITY
Alpha, Beta, and Gamma measurements
Neutron measurements
X-ray exposure | |
| 13. | MEDICAL INSTRUMENTATION
EKG portable recorders
EKG strip chart recorders
Defibrillators | |
| 14. | AUTOMATED MEASURING EQUIPMENT
Commercial automated calibration systems | |
| 15. | MATERIALS & PRODUCTS TESTING
Concrete
Building materials
Paper | Rubber
Structures |
| 16. | CHEMICAL ANALYSIS
Spectrophotometry
Gas chromatography
Spectrophotofluorometry | pH test
Water pollution
Air pollution |
| 17. | RADIOMETRY AND PHOTOMETRY
Luminous intensity
Total irradiance
Color temperature
Brightness temperature | Solar radiometry
Optical density |

APPENDIX III.

OTHER INFORMATION SOURCES

1. National Conference of Standards Laboratories

The National Conference of Standards Laboratories (NCSL) is a continuing, nonprofit, laboratory-oriented organization which promotes cooperative efforts toward solving the common problems faced by standards laboratories in their organization and operation. It was established in 1961 under the sponsorship of the National Bureau of Standards. Its membership consists of academic, scientific, industrial, commercial, and government laboratories concerned with measuring physical quantities, calibrating standards and instruments, and developing standards of practice. It provides liaison with technical societies, trade associations, and educational institutions interested in these activities.

NCSL pursues its goals through joint voluntary action. It holds conferences and workshops, collects and disseminates information about current practices, prepares source material for preferred technical procedures, determines pertinent statistical information related to measurement standards and calibration activities, and helps laboratories to arrange measurement agreement audits.

NCSL prepares and distributes "A Directory of Standards Laboratories" which lists member and other standards laboratories. Each laboratory listing includes the laboratory address, name and telephone number of a point of contact, and an indication of the capabilities of the laboratory. Although the majority listed are private laboratories, also included are some Federal and State government laboratories.

The NCSL directory and membership lists may be obtained from:

NCSL Secretariat
c/o National Bureau of Standards
Attention: L. Kenneth Armstrong
Boulder, CO 80303
(303) 497-3787

NCSL information is also available from the NBS
Office of Measurement Services.

2. Government-Industry Data Exchange Program

The Government-Industry Data Exchange Program (GIDEP) is a cooperative effort to save time and money by making maximum use of existing knowledge. The program allows exchange of technical data

essential in the research, design, development, production, and operational phases of the life cycle of systems and equipment.

The program is centrally managed and funded by the Government. Its participating organizations are the United States Army, Navy, Air Force, Marine Corps, Defense Supply Agency, General Services Administration, National Aeronautics and Space Administration, Department of Energy, and the National Security Agency, as well as the Canadian Department of Defense and hundreds of industrial organizations.

Participants in GIDEP have access to the four major data banks listed below. Proper use of these data banks can help improve quality and reliability and reduce costs in the development and manufacture of complex systems and equipment.

- Engineering Data Bank
- Failure Rate Data Bank
- Metrology Data Bank
- Failure Experience Data Bank

Participation requirements or additional information about GIDEP may be obtained from:

Director
GIDEP Operations Center
Corona, CA 91720
(714) 736-4677

JOURNAL OF RESEARCH

of the National Bureau of Standards

U.S. DEPARTMENT OF COMMERCE

Subscribe now— The new National Bureau of Standards Journal

The expanded Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology, and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent NBS publications in NBS and non-NBS media. Issued six times a year. Annual subscriptions: domestic \$13.; foreign \$16.25. Single copy, \$3. domestic; \$3.75 foreign.

- Note: The Journal was formerly published in two sections: Section A "Physics and Chemistry" and Section B "Mathematical Sciences."

NBS TECHNICAL PUBLICATIONS

PERIODICALS

JOURNAL OF RESEARCH—The Journal of Research of the National Bureau of Standards reports NBS research and development in those disciplines of the physical and engineering sciences in which the Bureau is active. These include physics, chemistry, engineering, mathematics, and computer sciences. Papers cover a broad range of subjects, with major emphasis on measurement methodology and the basic technology underlying standardization. Also included from time to time are survey articles on topics closely related to the Bureau's technical and scientific programs. As a special service to subscribers each issue contains complete citations to all recent Bureau publications in both NBS and non-NBS media. Issued six times a year. Annual subscription: domestic \$13; foreign \$16.25. Single copy, \$3 domestic; \$3.75 foreign.

NOTE: The Journal was formerly published in two sections: Section A "Physics and Chemistry" and Section B "Mathematical Sciences."

DIMENSIONS/NBS—This monthly magazine is published to inform scientists, engineers, business and industry leaders, teachers, students, and consumers of the latest advances in science and technology, with primary emphasis on work at NBS. The magazine highlights and reviews such issues as energy research, fire protection, building technology, metric conversion, pollution abatement, health and safety, and consumer product performance. In addition, it reports the results of Bureau programs in measurement standards and techniques, properties of matter and materials, engineering standards and services, instrumentation, and automatic data processing. Annual subscription: domestic \$11; foreign \$13.75.

NONPERIODICALS

Monographs—Major contributions to the technical literature on various subjects related to the Bureau's scientific and technical activities.

Handbooks—Recommended codes of engineering and industrial practice (including safety codes) developed in cooperation with interested industries, professional organizations, and regulatory bodies.

Special Publications—Include proceedings of conferences sponsored by NBS, NBS annual reports, and other special publications appropriate to this grouping such as wall charts, pocket cards, and bibliographies.

Applied Mathematics Series—Mathematical tables, manuals, and studies of special interest to physicists, engineers, chemists, biologists, mathematicians, computer programmers, and others engaged in scientific and technical work.

National Standard Reference Data Series—Provides quantitative data on the physical and chemical properties of materials, compiled from the world's literature and critically evaluated. Developed under a worldwide program coordinated by NBS under the authority of the National Standard Data Act (Public Law 90-396).

NOTE: The principal publication outlet for the foregoing data is the Journal of Physical and Chemical Reference Data (JPCRD) published quarterly for NBS by the American Chemical Society (ACS) and the American Institute of Physics (AIP). Subscriptions, reprints, and supplements available from ACS, 1155 Sixteenth St., NW, Washington, DC 20056.

Building Science Series—Disseminates technical information developed at the Bureau on building materials, components, systems, and whole structures. The series presents research results, test methods, and performance criteria related to the structural and environmental functions and the durability and safety characteristics of building elements and systems.

Technical Notes—Studies or reports which are complete in themselves but restrictive in their treatment of a subject. Analogous to monographs but not so comprehensive in scope or definitive in treatment of the subject area. Often serve as a vehicle for final reports of work performed at NBS under the sponsorship of other government agencies.

Voluntary Product Standards—Developed under procedures published by the Department of Commerce in Part 10, Title 15, of the Code of Federal Regulations. The standards establish nationally recognized requirements for products, and provide all concerned interests with a basis for common understanding of the characteristics of the products. NBS administers this program as a supplement to the activities of the private sector standardizing organizations.

Consumer Information Series—Practical information, based on NBS research and experience, covering areas of interest to the consumer. Easily understandable language and illustrations provide useful background knowledge for shopping in today's technological marketplace.

Order the above NBS publications from: Superintendent of Documents, Government Printing Office, Washington, DC 20402.

Order the following NBS publications—FIPS and NBSIR's—from the National Technical Information Services, Springfield, VA 22161.

Federal Information Processing Standards Publications (FIPS PUB)—Publications in this series collectively constitute the Federal Information Processing Standards Register. The Register serves as the official source of information in the Federal Government regarding standards issued by NBS pursuant to the Federal Property and Administrative Services Act of 1949 as amended, Public Law 89-306 (79 Stat. 1127), and as implemented by Executive Order 11717 (38 FR 12315, dated May 11, 1973) and Part 6 of Title 15 CFR (Code of Federal Regulations).

NBS Interagency Reports (NBSIR)—A special series of interim or final reports on work performed by NBS for outside sponsors (both government and non-government). In general, initial distribution is handled by the sponsor; public distribution is by the National Technical Information Services, Springfield, VA 22161, in paper copy or microfiche form.

BIBLIOGRAPHIC SUBSCRIPTION SERVICES

The following current-awareness and literature-survey bibliographies are issued periodically by the Bureau:

Cryogenic Data Center Current Awareness Service. A literature survey issued biweekly. Annual subscription: domestic \$35; foreign \$45.

Liquefied Natural Gas. A literature survey issued quarterly. Annual subscription: \$30.

Superconducting Devices and Materials. A literature survey issued quarterly. Annual subscription: \$45. Please send subscription orders and remittances for the preceding bibliographic services to the National Bureau of Standards, Cryogenic Data Center (736) Boulder, CO 80303.
